Disruption for pneumatic tube system

The pneumatic tube system in Wagga Wagga Base Hospital will be unavailable from **8pm Monday 9 November to 4am Tuesday 10 November 2020**.

The disruption will enable the final connection and integration of the Hospital's system with the infrastructure in the Stage 3 building including wiring and testing.

During the temporary shutdown, an additional wards person will be based in the Emergency Department to assist with transportation of pathology samples. In other units of the Hospital, please contact the night wards person for assistance.

The After-hours Nurse Manager will be made aware when the pneumatic tube system resumes normal operation.

Thank you for your ongoing cooperation during the third and final stage of the Redevelopment.
